

Plan 026 native loss: fitted trends and conditional long-run estimates
Different objectives: absolute losses are not a reconstruction-quality comparison

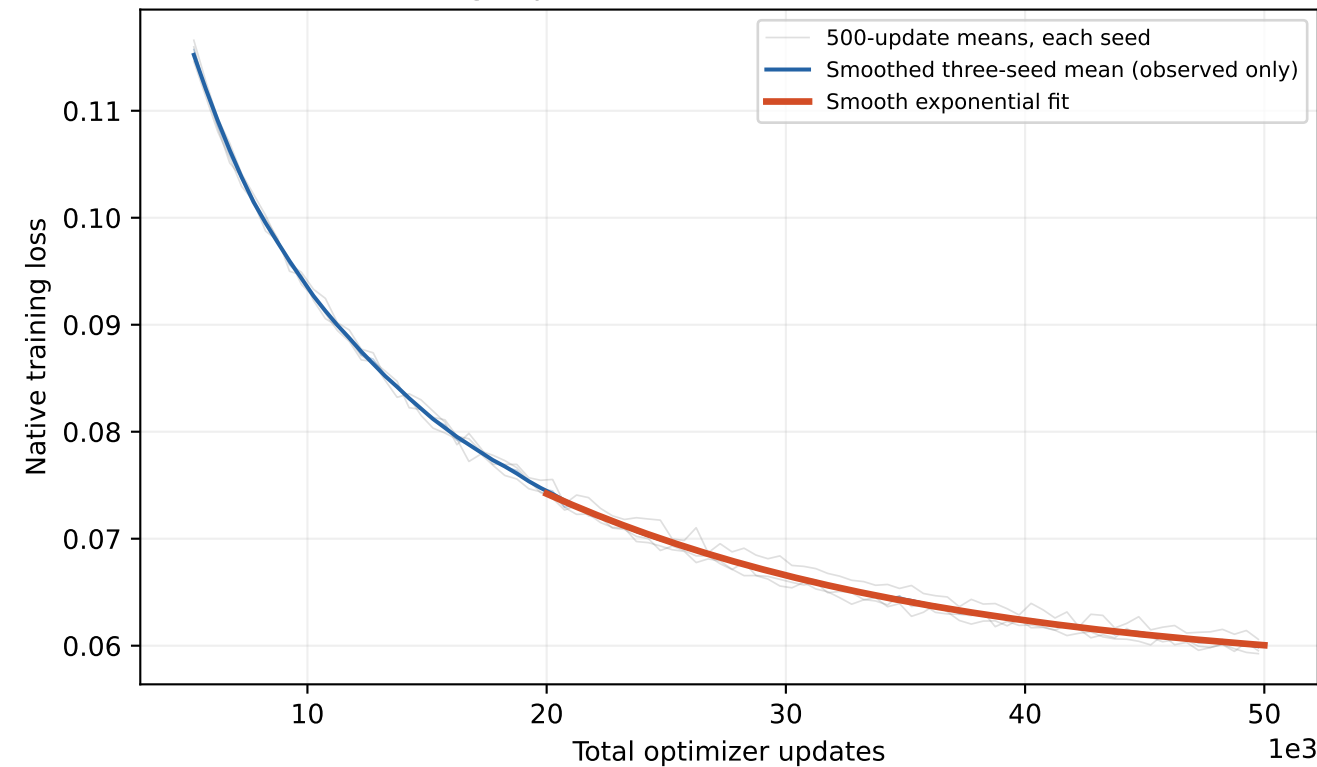

stg-full: observed losses and fitted tail

$$L(t) = 0.042899 + 0.006606(t/20000)^{-0.5207}$$

freetimegs-sparse: observed losses and fitted tail

$$L(t) = 0.057189 + 0.017019 \exp(-(t-20000)/16805.2)$$
